EDUCATION

Southern New Hampshire University

Bachelor of Science in Computer Science, Minor in Robotics, GPA: 4.00

Manchester, NH

Expected May 2027

Coursework: Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Operating Systems

Activities: Colorstack, Management Leadership for Tomorrow, Sponsors of Educational Opportunities

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Python, Java, HTML/CSS

Frameworks & Tools: Angular, Ionic, NgRx, React Native, Expo, Next.js, Firebase, Supabase (PostgreSQL), Git

WORK EXPERIENCE

Fidelity Investments

Merrimack, NH

Software Engineering Intern

Jun 2026 – Present

- Delivered an enterprise user-management capability across a 5-layer architecture, separating the Angular/Ionic UI, NgRx SignalStore, repository, API-wrapper, and Orval-generated OpenAPI layers to enforce typed contracts and prevent direct API dependencies in presentation and state-management code
- Strengthened client-side release control across 3 of 3 tested navigation conditions, achieving 100% route-guard code coverage by integrating reactive LaunchDarkly evaluation with an Angular functional guard and context-aware deep-link redirection
- Achieved 100% statement, line, and function coverage and 85.21% branch coverage across 106 passing Jest tests, validating signal-driven forms, account-scoped caching, navigation, validation, API success and failure states, and reactive side effects

Fidelity Investments

Merrimack, NH

Software Engineering Intern

Jun 2025 – Aug 2025

- Re-engineered 2 high-traffic navigation and discovery modules (Discovery Page, Sidebar Menu) using Angular, Ionic, and NgRx, improving page-load speed by 25% and reducing UI-related regressions by 40%
- Architected a library of 5+ modular services and reusable components aligned with Fidelity's design standards, increasing code reusability by 45% across the hybrid mobile ecosystem
- Resolved 10+ routing and state-sync issues using Redux patterns, reducing state-related crashes by 20%

PROJECTS

AI-Powered Personal Finance & Budgeting App (TypeScript, Express, PostgreSQL, React Native, Claude API)

- Built Guardian, and deployed a REST API with 15 OpenAPI-documented endpoints and a 5-screen React Native app for logging transactions, setting budgets, and tracking per-category spending, secured with Firebase JWT auth
- Integrated Claude for automatic merchant categorization behind a Postgres cache (≤ 1 LLM call per unique merchant, 40% cache-hit rate), with graceful fallback so a model outage never blocks a transaction
- Designed a 3-state trusted-viewer authorization system (pending/accepted/revoked) granting invited users read-only dashboard access across 5 dedicated endpoints, validated by 4 access-isolation tests
- Wrote 80 automated tests at 93.8% statement coverage, running offline via injected auth, data, and LLM clients

AI Career Guidance Platform (Next.js, React, TypeScript, Tailwind CSS, Firebase, OpenAI)

- Built AspireAI, an AI-powered career guidance platform with 15 page routes and 9 core product experiences using Next.js, TypeScript, Firebase, and OpenAI
- Developed a multi-agent architecture with 5 specialized AI agents and an orchestration layer, including a 3-stage interview pipeline that analyzes resumes, generates tailored questions, and scores responses on a 1–5 STAR rubric
- Implemented a lightweight RAG system across 2 embedding collections, using cosine-similarity search to retrieve the top 3 grounded results for career recommendations and interview assessment

Real-Time Campus Events Platform (React Native, Expo, TypeScript, Supabase, Firebase)

- Launched BuzzUp, a cross-platform campus events platform, on a 2-person team, now adopted by 25+ SNHU students
- Engineered a real-time notification pipeline with Supabase Realtime and Expo push, instantly syncing RSVP and event updates across 8+ features
- Modeled a relational 8-table PostgreSQL schema in Supabase keyed to Firebase Auth UUIDs for identity-linked data

Restaurant Operations & AI Analytics Platform (React Native, Expo, Supabase, Firebase, Claude API)

- Developed Meow Management, a 7-screen restaurant operations platform unifying live revenue analytics, automated inventory alerts, and AI-assisted reporting in one mobile app
- Automated inventory monitoring with PostgreSQL triggers firing low-stock alerts at set thresholds across 4 tables
- Engineered an LLM-powered natural-language query interface that translates open-ended questions into structured Supabase queries, grounding answers in live operational data via dashboard summary cards
